Figure 1

Total gas production (A), methane production (CH₄, B) and ammonia (NH₃, C) concentration in the incubation medium measured after 24 h of *in vitro* rumen fermentation of a basal diet alone or with hazelnut pericarps (HP), pellets of sainfoin (PS) and HP + PS. White and black bars are values obtained in the absence and in the presence of polyethylene glycol (PEG) in the medium, respectively

^{a,b,c} Means in the absence of PEG (white bars) with different subscripts differ ($P < 0.05$).

PEG effect : * $P < 0.05$, ** $P < 0.01$, NS: not significant ($P > 0.05$)
